What is claimed is:

- 1. A compound 8 to 80 nucleobases in length targeted to a nucleic acid molecule encoding KOX 1, wherein said compound specifically hybridizes with said nucleic acid molecule encoding KOX 1 and inhibits the expression of KOX 1.
- 2. The compound of claim 1 which is an antisense oligonucleotide.
- 3. The compound of claim 2 wherein the antisense oligonucleotide comprises at least one modified internucleoside linkage.
- 4. The compound of claim 3 wherein the modified internucleoside linkage is a phosphorothicate linkage.
- 5. The compound of claim 2 wherein the antisense oligonucleotide comprises at least one modified sugar moiety.
- 6. The compound of claim 5 wherein the modified sugar moiety is a 2'-O-methoxyethyl sugar moiety.
- 7. The compound of claim 2 wherein the antisense oligonucleotide comprises at least one modified nucleobase.
- 8. The compound of claim 7 wherein the modified nucleobase is a 5-methylcytosine.
- 9. The compound of claim 2 wherein the antisense oligonucleotide is a chimeric oligonucleotide.
- 10. A compound 8 to 80 nucleobases in length which specifically hybridizes with at least an 8-nucleobase portion of a preferred target region on a nucleic acid molecule encoding KOX 1.
- 11. A composition comprising the compound of claim 1 and a pharmaceutically acceptable carrier or diluent.
- 12. The composition of claim 11 further comprising a colloidal dispersion system.
- 13. The composition of claim 11 wherein the compound is an antisense oligonucleotide.

ISPH-0758 -117- PATENT

14. A method of inhibiting the expression of KOX 1 in cells or tissues comprising contacting said cells or tissues with the compound of claim 1 so that expression of KOX 1 is inhibited.

- 15. A method of treating an animal having a disease or condition associated with KOX 1 comprising administering to said animal a therapeutically or prophylactically effective amount of the compound of claim 1 so that expression of KOX 1 is inhibited.
- 16. The method of claim 15 wherein the disease or condition is a hyperproliferative disorder.
- 17. The method of claim 16 wherein the hyperproliferative disorder is cancer.
- 18. The method of claim 15 wherein the disease or condition arises from viral or bacterial infection.
- 19. The method of claim 15 wherein the disease or condition involves hyperactivation of an immune response.
- 20. A method of screening for an antisense compound, the method comprising the steps of:
 - a. contacting a preferred target region of a nucleic acid molecule encoding KOX 1 with one or more candidate antisense compounds, said candidate antisense compounds comprising at least an 8-nucleobase portion which is complementary to said preferred target region, and
 - b. selecting for one or more candidate antisense compounds which inhibit the expression of a nucleic acid molecule encoding KOX 1.
